

Diagnostic Report

AI-Assisted Medical Summary

1. Diagnosis

No Tumor

2. Specialty

General Physician

3. Detailed Report

Condition Detected: No Tumor

The AI analysis of your CT scan indicates a very low probability of a tumor, with a confidence score of 98.00%. This suggests that there is no significant abnormal mass or growth present in the scanned region. 3D CT scans assist in detecting tumors by providing detailed cross-sectional views of the body, allowing doctors to examine internal tissues with greater precision and identify subtle abnormalities that might be missed by other imaging methods. However, due to the nature of CT scans, there can be instances where small tumors are not identified, therefore, monitoring your health is important.

As a next step, it is advisable to consult with your doctor for a comprehensive review of your medical history and symptoms. While the AI analysis is reassuring, your doctor may recommend additional imaging or monitoring based on your individual risk factors and clinical presentation.

4. Detected Symptoms

No symptoms detected.

5. Recommended Tests

- Blood Test
- Imaging
- Consultation

6. Confidence Assessment

Confidence Score: 100%

High confidence in diagnostic analysis.

7. Clinical Recommendations

- Consult a General Physician
- Follow a healthy lifestyle
- Get relevant tests done
